

KEM FOT

Description

KEM FOT is a liquid compound containing solvents, dispersants and surface active agents, which solves effectively all pre-combustion problems.

Application

KEM FOT prevents stratification of fuel in tanks, limits sludge and tank bottom deposits maintaining clean lines and separators, provides anticorrosion protection by acids or salt water contamination and finally improves injector spray patterns keeping filters unblocked.

Advantages

KEM FOT stabilizes fuel blends, reducing incompatibility problems, accelerates the rate of combustion, forms a protective film on metal surfaces, prevents asphaltic matter in the fuel from agglomerating, demulsifies water from fuel and aids centrifugal separation.

Usage

KEM FOT is to be introduced into the storage tank before bunkering manually or automatically. Typical dose rates vary between 1:2000 and 1:5000 depending on the viscosity of the fuel oil used.

Specification

Appearance	: Pale brown liquid
Specific gravity	: 0.850
Corrosive action:	Metals: None
	Rubber: May swell slightly

Caution

Avoid contact with skin and clothing. Rinse thoroughly with plenty of water in case of contact with skin or eyes.

Packaging

Non returnable 210 lt drums and 30 lt pails.
