

LIQUID COAGULANT

Description

LIQUID COAGULANT is a liquid product that contains high molecular weight compounds used in both medium and low-pressure boilers for preventing sludge deposits.

Applications

LIQUID COAGULANT is especially useful when feedwater becomes contaminated by oil, or when a high concentration of solids is suspected.

LIQUID COAGULANT coagulates all oil droplets and solids to the low points of the boiler where they are removed by blowdown.

Usage

LIQUID COAGULANT may be added directly to the boiler by means of a by-pass pot feeder or dissolved with other boiler treatment chemicals.

The usual daily dose is about 200 ml for boilers that have a capacity of 10 tons or 20 ml. daily for every ton of boiler capacity depending on water hardness, total dissolved solids, etc.

It is recommended a daily flash blow down.

It is not necessary to check LIQUID COAGULANT.

Specification

Appearance : Colorless to pale yellow liquid.

Specific gravity : 1.02 - 1,04

Caution

Avoid contact with eyes and skin. In case of contact wash with plenty of water and seek medical aid.

Packaging

Non returnable 210 lt. drums and 30 lt. pails.
