

2003 – ELECTRONIC CONTACT CLEANER

Very Fast Evaporating

MIL-C-81302 SUBSTITUTE

Description:

2003 is a completely new technology, liquid compound, especially formulated for use in all cleaning operations where a very fast evaporating product is required.

2003 meets the requirements of specification MIL-PRF-29608.

Advantages:

- a) Practically odorless
- b) Safe to all metals and plastic parts
- c) High cleaning ability
- d) Evaporates very quickly and completely, leaving no residues
- e) Has a low halogen and sulfur content, is free from alkali metals and does not contain chlorinated solvents

Application:

2003 is used for removing oil, grease, dust, light carbon and other filth from engines, spare parts, machinery, equipment, electric apparatus, generators, cables, switches, relays, video tuners, potentiometers, transistors and electronic equipment. It does not attack plastic, insulating materials, cables and has high cleaning ability.

It is used undiluted and may be applied by brush, dipping or non-atomizing spray. Allow **2003** to completely evaporate leaving surface dry.

2003 is specially developed to replace (MIL-C-81302) 1,1,2-Trichloro 1,2,2 – Trifluoroethane which is characterized as causing depletion of the ozone layer according to the Montreal Protocol and has been forbidden.

2003 according to the above specification is used for cleaning space vehicle components, precision assemblies, oxygen systems and electronic equipment by the processes of spraying and flushing.

Precautions:

Avoid contact with skin and eyes. For further information refer to M.S.D.S.

Packaging:

2003 is available in 20-liter pails and 400-ml. aerosols.

Note:

2003 is a very fast evaporating product, leaves no residue and has a high dielectric constant (over 25,000 volts).
